

Abstract

The present invention relates to a container for sheet products that makes it easy to take out each individual piece of the sheet products stacked in the container.

- 5 The container having a tray-like container body (2), an opening/closing lid (3) that is slidably mounted on the container body (2), a pressing member (5) elastically pressing the sheet products (4) stored in the container (1) toward the inner surface of the opening/closing lid (3), a friction drag member (7) that
- 10 is installed on the inner surface of the opening/closing lid (3) to feed out the sheet products (4) according to the closing operation of the opening/closing lid (3), and a stopper (6) formed in the container body (2) to stop the backward movement of the sheet products (4) by the friction drag member (7) when the
- 15 opening/closing lid (3) is opened.
